WHO WE ARE

4M Group is a leading company specializing in contracting and supply solutions, delivering high-quality works across Structural, Roads, Infrastructure, and Landscaping projects.

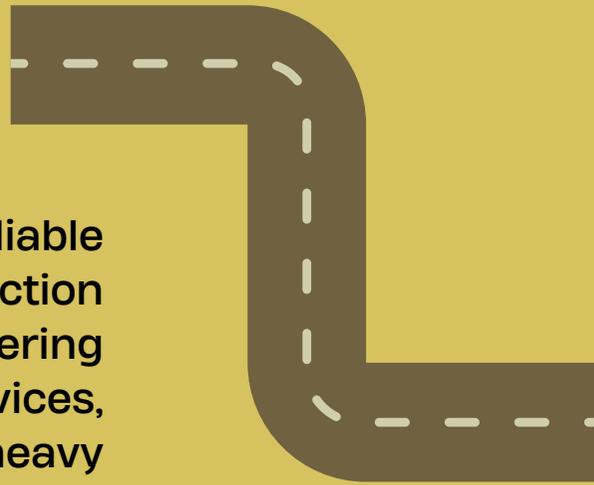

Alongside our contracting operations, 4M Group operates a dedicated supply division that provides heavy equipment spare parts and construction chemical admixtures, ensuring our clients receive reliable products and comprehensive technical support for efficient project execution.

Driven by a strong commitment to quality, innovation, and integrated solutions, 4M Group consistently delivers projects on time, within budget, and in full compliance with the highest industry standards.

Mission

To provide exceptional and reliable solutions in executing construction projects across Egypt by delivering fully integrated contracting services, construction materials, and heavy equipment spare parts, through a highly motivated, well-trained, and customer-oriented workforce, while achieving sustainable and profitable growth.

Vision

To be a leading corporate group in Egypt, delivering comprehensive construction and commercial solutions that create sustainable value for our clients and partners.

WHAT WE PROVIDE

Our Services

4M Group provides integrated contracting services covering general construction, roads, infrastructure, supplementary works, and landscaping projects. We are also specialized in construction chemicals, 4M Group offers products for the construction industry, including solutions for bonding materials, sealing, concrete care, structural reinforcement, and surface protection.

**Structural
Construction Projects**

**Road Construction
&
Road Maintenance**

**Landscaping
&
Ancillary Works**

**Insulation
&
Waterproofing Works**

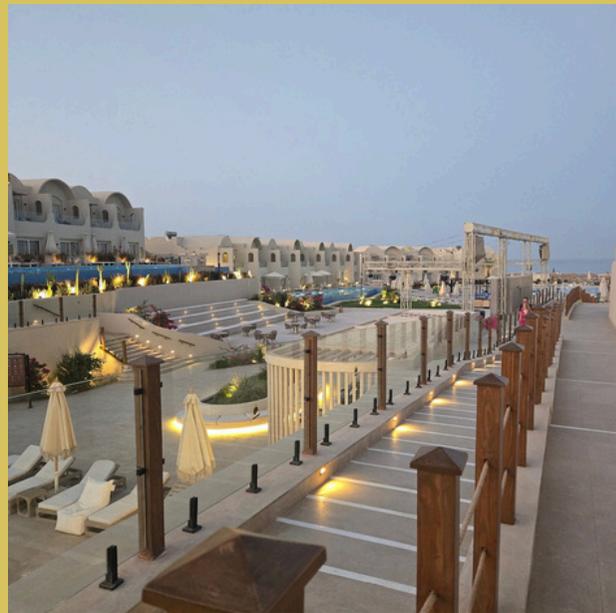

OUR PROJECTS

ASPHALT, PAVEMENTS, AND STAMPED CONCRETE WORKS

PORTOFINO VILLAG, MARSA ALAM

SUNRISE VILLAGE, MARSA ALAM

PORTO VITA VILLAGE, MARSA ALAM

SELECTED EXECUTED PROJECTS

- ✓ Multiple road projects at El Gouna
- ✓ Internal Road works at Harmony Makadi Hotel, Hurghada
- ✓ Landscaping and garage marking works at Senzo Mall & Senzo Club, Hurghada
- ✓ Swimming pool insulation works for Albatross Golf Company
- ✓ Insulation works for the water tank of the Egyptian-Swiss Company for Integrated Development
- ✓ Pump room insulation works at Albatros Palace Hotel and Beach Albatros Hotel

Our Products

Heavy Equipment Spare Parts

4M Group is a trusted supplier of heavy equipment spare parts for a wide range of machinery, committed to delivering high-quality products that ensure performance, durability, and customer satisfaction. We also provide technical support, engineering consultation, and after-sales services to our clients.

Range of Products

- Wear parts
(Cutting Edges, Ripper Tips, End Bits, Bucket Plates, Adapters, Tips, Guards, and Strip Wears)
- Engine Overhaul Parts
(CAT, IPD, and FP)
- Filters

Supported Brands

KOMATSU

Perkins®

OUR PARTS

Our Products

Construction Chemicals & Admixtures

Additionally, 4M Group is an Official Distributor for leading international manufacturers of construction chemical admixtures, delivering advanced solutions that enhance the quality, strength, durability, and overall performance of concrete. Our products are developed using the latest technologies and comply with recognized international standards, making them an ideal choice for residential, industrial, road, and infrastructure projects, where performance and reliability are essential.

Range of Products:

- Concrete Admixtures
- Fiber Structures
- Steel Fiber
- Polytwist Fiber

Authorized Brands

Steel Fiber

Steel fibers are short, discrete metal filaments added to concrete to create a 3D composite, significantly improving its toughness, crack resistance, ductility, and post-crack strength, making it ideal for industrial floors, shotcrete, and heavy-duty pavements by bridging cracks and absorbing energy, often replacing or supplementing traditional rebar/mesh for faster construction and better performance.

Key Features

- Easy to use & high performance
- Saves the contractor time and money
- Improves site safety
- Superior crack control compared to conventional methods
- Degradable bag reduces handling and material wastage

Properties

- Tensile Strength (Rm): $2100 \pm 7.5\%$ MPa
- Young's Modulus: $200 \pm 15\%$ GPa
- Quantity of Fibers: 3,200 fibers/kg
- Minimum Dosage: 25 kg/m^3

Dimensions

- Length: $50 \text{ mm} \pm 7.5\%$
- Diameter: $1.00 \text{ mm} \pm 7.5\%$
- Aspect Ratio (l/d): 50
- Shape: Round, Hooked End

Applications

- Industrial floors
- Roundabouts & roads
- Precast concrete
- Slab on pile

Polytwist Fiber

Polytwist fiber is a high-performance twisted polypropylene fiber designed to enhance concrete performance by controlling plastic shrinkage and early-age cracking. The twisted geometry improves bonding within the concrete matrix, ensuring effective dispersion and reinforcement at the micro level.

Key Features

- Effective control of plastic shrinkage and early thermal cracks
- Improves concrete homogeneity and surface finish
- Reduces bleeding and segregation
- Enhances durability and resistance to abrasion
- Non-corrosive and chemically inert
- Easy addition directly into the concrete mix
- Polytwist fibers provide micro-reinforcement throughout the concrete matrix, effectively controlling early-age cracking, while traditional reinforcement primarily addresses structural loads at specific locations.
- Polytwist fiber is added directly to the concrete mixer during batching, with a typical dosage ranging from 0.6 to 1.0 kg/m³.

Applications

- Slabs-on-grade and concrete floors
- Pavements and sidewalks
- Foundations and concrete toppings
- Shotcrete applications
- Precast concrete elements
